

# Sequential Signing Order Test

Set signing order: A signs → B signs → C signs (A then B then C)

Purpose:

- Use this PDF to test 'signing order' enforcement in your e-sign workflow.
- Expected behavior: only the current signer can sign; next signer is locked until previous completes.

## Document Metadata (fillable)

Title

Reference No.

## Signing Area (Order: A → B → C)

Each signer fills Name / Date and signs in the signature box.

### Signer A

Name

Date

Signature (box)

### Signer B

Name

Date

Signature (box)

### Signer C

Name

Date

Signature (box)

## Agreement

I confirm I have reviewed the document and agree to sign electronically.

# Audit Trail (for testing)

Verify system logs match each signer action (A then B then C).

Checklist:

- Event order should be A signed → B signed → C signed (no out-of-order signatures).
- Capture: user, timestamp, action, document version/hash (if available).
- Early signing attempts should be blocked and logged.

**Tester Notes (fillable)**
